## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-10 and 12-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uptegraph (U.S. Patent Number 5,673,850) in view of Hyltin et al. (U.S. Patent Number 4,264,034) or Truong et al. (U.S. Patent Number 5,943,917).

Uptegraph discloses a programmable thermostat. Referring to Figs. 1-4, the device comprises an input device 2, memory device 7, display device 5, programming device 4, comparison device 8, temperature modifying device 6 and controller 3. Uptegraph discloses the invention substantially as claimed. Uptegraph discloses a rotatable controller and does not disclose linearly movable member. However, Uptegraph discloses a rotatable controller is shown in the Fig. 1 and discloses other equivalent devices will be apparent to those of ordinary skill in the art. Hyltin et al. and Truong et al. disclose linearly movable member to select the options in the same field of endeavor for the purpose of select setting. In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper.

Application/Control Number: 10/706,107

Art Unit: 3744

Page 3

See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971). Linearly and rotatable thermostat controller are equivalent in the prior art (e.g; Levine et al. (U.S. Patent Number 4,751,961) and Truong). The teaching art of Hyltin et al or Truong et al. is the linearly moveable member and the combination of programming mode and running mode are disclosed in Uptegraph. Also, upon a close review of applicant's specification, applicant does not specify the deficiencies of rotatable member used in the prior art and does not show any better or provided improved performance over that which is commonplace in the prior art. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the apparatus of Uptegraph with a linearly movable member in view of Hyltin et al. or Truong et al. so as to select control options.

## Conclusion

3. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
